ENDO MAKOTO

(57)Abstract:

SOLUTION: Tasks A-C stored in areas 31-33 of an under-execution task and execution waiting task group storage area 30 are generated by a cyclic task generating means 21 and activated by a cyclic task activating means 22. When interrupting the execution of the cyclic task B, for example, the cyclic task B is moved to an area 41 of an under-interruption cyclic task group storage area 40 so that the execution of the cyclic task B can be interrupted. When restarting the interrupted execution of the cyclic task C, the cyclic task C is moved

from the area 41 of the under-interruption cyclic task group storage area 40 to the area 33 of the under-execution task and execution waiting task group storage area 30 by a cyclic task restarting means 26 so that the execution of the cyclic task C can be restarted.

LEGAL STATUS

[Date of request for examination] 16.04.2002

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]
